### Prescription data transfer system (OCS)

Server program (OnCube) receives prescription data in OCS form. PC connected to JV-45RDC10 displays the order list before dispensing. With the interface feature that 45RDC10 presents, users can effectively manage patient information and medication information.

### Customized Print Layout

Information can be customized and be printed on each pouch. Patient information and medicine information, including shape, color, quantity, expiry date, lot number, and the barcode, can be printed. Preferred language could be selected and modified on the print layout.

### Easy Ribbon Replacement

Users can easily replace print ribbon roll with its detachable cartridge.

### LED Lighted Cells

LED lighted cells allow users to easily identify and locate where they need to place medication.

### Easy Paper Replacement - Instant Sealing

When the user replaces a paper roll, the previous roll can be instantly attached to the new roll.

### Convenient Cleaning

Medicine collecting hopper can be easily detached for cleaning and maintenance.
